

# New Product Feature Announced at CARTES 2015

Keypasco offers the ultimate combination of online security and price efficiency

**Gothenburg, October 6th, 2015** – Keypasco are happy to announce a new product feature at the CARTES Exhibition in November 2015. This new feature is a natural extension of the secure authentication and secure mobility solution offering secure signatures in a PKI solution.

Let me introduce the Keypasco PKI Sign feature.

The PKI Sign solution is a dynamic feature that offers ICPs (Internet Content Providers) full support of PKI in a portable mobile device. The solution can easily be integrated into an existing PKI infrastructure. We consider us the best vendor of a PKI in a portable mobile device due to our unique security design. Traditionally PKI systems have been various forms of hardware and dependent on the end user as the carrier of the sensitive private keys. Our PKI Sign solution is a versatile and customizable soft PKI option to the market of authentication.

Don't forget to stop by our booth at the conference (4 N 080) in Paris November 17th to 19th. Join us to talk about secure authentication, secure mobility, our unique features, and see a live demo of our solution.

## About Keypasco

With more than 20 years of individual experience in IT security, Keypasco's founders are the minds behind some of the revolutionary authentication technology solutions used today. Keypasco offer a patent-approved secure authentication and secure mobility solution to 13.9M end users in the online gaming and financial/banking industry.
